

Information Security & Technology Consulting

Yeoman Security offers security assessments, roadmaps to resolving issues and preventing future ones, and training and awareness, customized for your environment and needs.

The focus is on securing the systems your business relies on and safeguarding your data, including compliance areas like GDPR, PCI, PII, and HIPAA, and implementing what is needed to reduce business risk.

Services and Expertise

Whether a small business or corporate enterprise, Yeoman Security Consulting offers one-time engagements, as well as follow-up efforts, to find security risks and help you implement and maintain lasting solutions.

Risk Management Delivering approaches to prioritize security risk, ways to evaluate improvement, and establish baselines that manage the security process.

Data Protection & Compliance Offering software and data security reviews to support ISO 27001, HIPAA, and PCI-DSS security audits and initiatives to become compliant.

Vulnerability Assessment & Remediation

Providing security assessments, code reviews, architecture analysis, and threat modeling to ensure secure outcomes.

Security Program & IT Management From business continuity plans, rolling out tools and practices for developers and staff, driving security programs to meet compliance, and creating a security program from scratch

Security Training & Awareness Materials include technical bulletins, policies and procedures to define what is the right path to security, and custom training.

Yeoman Security Can Help

With over 20 years of experience of IT and Information Security experience, you get practical solutions that fit the right needs.

Yeoman Security tailors the appropriate mechanisms, policies and procedures, processes and training to the right protection for your data.

From experience with startups to Fortune 500 companies, the result is lasting security and value.
